The Center for Research on Race and Ethnicity in Society presents:

A CRRES Speaker Series Lecture

Tennisha Riley
CRRES Postdoctoral Fellow
Department of Psychological and Brain Sciences
Indiana University

Thursday, August 29, 4:00pm
Walnut Room, Indiana Memorial Union

Adolescents engage in risk behaviors (i.e., substance use, aggression and fighting, sexual risk behaviors) at an alarming rate, and particularly when they are with their peers. These behaviors are preventable as developmental process such as emotion regulation are highly amenable to treatment and intervention. Dr. Riley’s research in psychology and developmental science uses an integrative cognitive-affective-social framework for understanding both adolescent risk behaviors and positive development. In this talk, Dr. Riley will discuss how cultural context shapes the emotional development of African American adolescents and their subsequent decisions to engage in behaviors that are either risk-related or prosocial in the context of their peers. In addition, Dr. Riley will consider how African American adolescents and their families contend with emotions and risk behaviors within a cultural context that includes racial-ethnic discrimination experiences. Dr. Riley’s research is informed by her experiences as a multisystemic family therapist, and seeks to inform the development of risk behavior interventions that are culturally relevant for African American youth.
